

CROCKER POND

Albany Twp., Oxford Co.
U.S.G.S. East Stoneham, Me. (7.5')

Fishes

Brook trout

Physical Characteristics

Area - 13 acres

Temperatures:

Surface - 78°F

Maximum depth - 7 feet

7 feet - 76°F

Principal fisheries: Brook trout

Crocker Pond is a small, shallow water located in the White Mountain National Forest (WMNF) in Albany, Maine. It is easily accessible via vehicle, and the WMNF maintains a nice campground facility along the northeastern shoreline.

The pond is homothermous and provides limited opportunity to manage for trout. However, the Department has maintained a long standing put-and-take stocking program at Crocker due to its accessibility and campground use. Trout stocked at legal size provide predominantly fall and spring fishing opportunities. Crocker is a headwater pond to Broken Bridge and Round Ponds, and has been reclaimed on several occasions to support more intensive trout management on those waters. It is important fish not be illegally introduced to Crocker Pond as they will migrate to other nearby waters and impact the quality of those trout fisheries. Special regulations are in effect on this water, anglers should consult their fishing law book before fishing this pond.

The pond can be accessed via the Crocker Pond Campground Road, and the WMNF maintains a carry-in launch area adjacent to the campground that is well suited for canoes and kayaks.
